

ONEOFFICE™

INFRASTRUCTURE CONSTRUCTION AND COST MANAGEMENT

CUSTOMIZE AND COLLABORATE

OneOffice is a customizable infrastructure construction project management solution that allows each agency to track the information pertinent to their agency and project type.

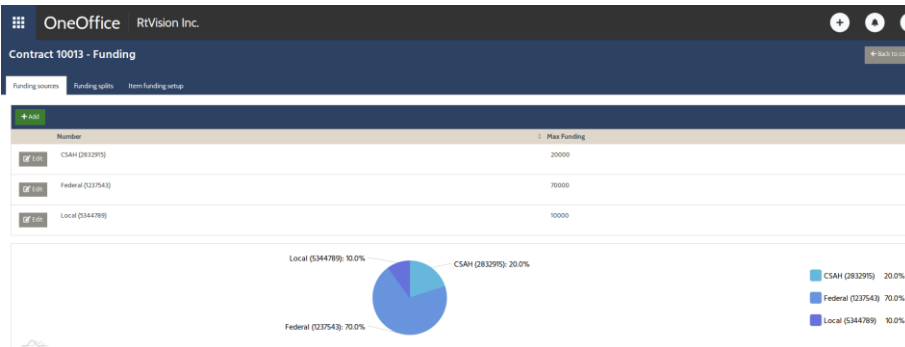

Efficiently manage infrastructure and maintenance projects and connect with other Agencies, Consultants and Contractors for access to real-time information, keeping projects in compliance and improving project communications.

FUNDING ALLOCATION MANAGEMENT

Funding management tools provide the ability to quickly identify and manage multiple funding sources. Create any number of funding splits to divide and cap sources across multiple projects and project items.

Linked to item transactions, easily select from available funding when recording item transactions. Create and export custom funding reports to provide information to other agencies on cost status.

SUMMARY

OneOffice is a complete infrastructure construction project management solution, from project concept through project completion.

BENEFITS

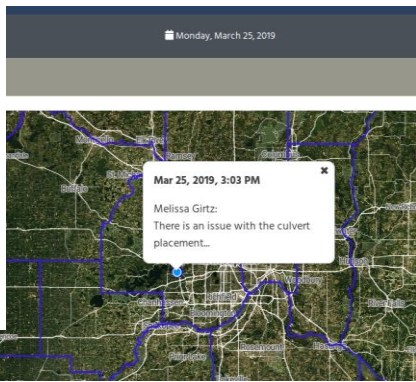

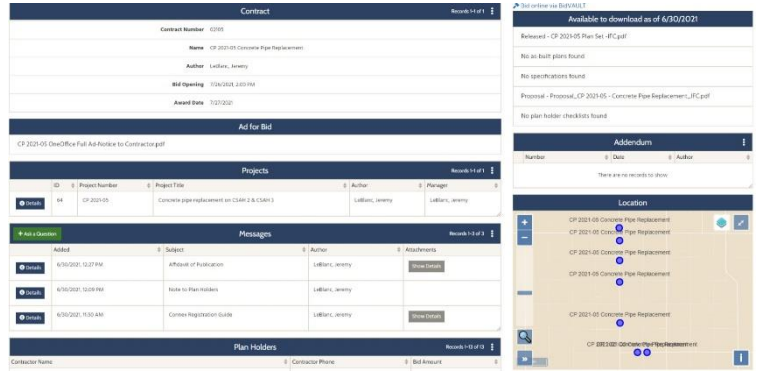

- ✓ Collaborate with all project stakeholders, improving communication and reducing delays
- ✓ Easily connect with other applications and customize the application to scale with your changing needs
- ✓ Improve auditing and reduce costly mistakes through automated auditing and data management

PROCUREMENT & PUBLIC DASHBOARDS

Project plan room and project update dashboards allow for each agency to customize the data they want to share to the public. Plan holders can access plans, ask questions, view messages and addendum, as well as, download item lists; all from a single, free-to-use location. Update the public on planned or completed projects by including narratives and photos.

FIELD INSPECTIONS & CHANGE MANAGEMENT

Manage all of your project inspection data in one location, from any device and browser, even without Internet access. Location tracked notes, photos, and material tests allow you to record issues and documentation then easily report and view from project maps or user-defined tags.

Easily record item quantities that provide real-time reporting and payment creation, reducing costly re-entry mistakes and calculation errors.

Record changes and update item funding, even during Construction. Request submittals and collaborate with contractors through rule-based and integrated processes.

DOCUMENT MANAGEMENT & RETENTION

Create custom documents and reports through a Microsoft Office integration with OneOffice. Using RSA encryption, digital signatures can be added to any document. Approvers are notified via email when their approval is requested and the status of each document can be easily tracked, stored, and located. Completed projects can be archived and accessed for years to come, without the need to purge data or 'free up space'.

ABOUT RTVISION

RTVision is a software-application company that has been working with local government agencies for over 20 years. Our focus is to optimize the impact of local government through inventive technologies that streamline operations, connect people, and protect data integrity. With over 300 product installs across the United States, RTVision products have value in agencies of every size and budget.
