ONEOFFICE™

RIGHT OF WAY MANAGEMENT

CUSTOMIZE AND COLLABORATE

OneOffice is a customizable, web-based, and mobile-enabled project management solution that provides the ability to manage land acquisition projects and the parcels or properties that are impacted. OneOffice provides the ability to maintain all relevant project and parcel data in one location so there is never a question of where to find information, or if it is the most current version. With built in audit-tracking, every change made in the application is documented and records details to easily revert changes or review an audit trail.
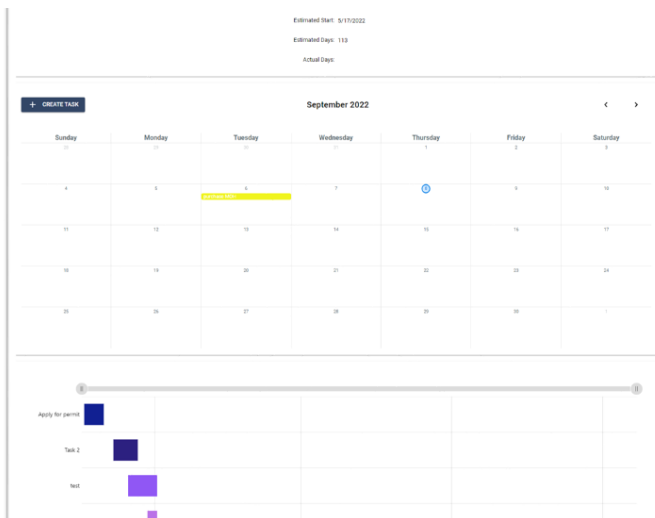

PAYMENTS AND APPRAISALS

Record project and parcel payments to easily see budget summaries at the parcel, project and application level. Additionally, track interest types, such as liens, to be able to view data for all relevant stakeholders, from one location.
A customizable appraisal worksheet allows for an itemized record of parcel appraisals that provide system-calculated totals for various easement types, including temporary easement calculations.

SCHEDULING & TASK ASSIGNMENTS

Using task lists and scheduling, easily record important dates and assign tasks to view schedules from calendar and Gantt chart views. Setup and receive notifications and reminders when assigned tasks are coming due.

SUMMARY

OneOffice for Right of Way Management provides a central location to maintain all records and improve communications essential for right of way management.
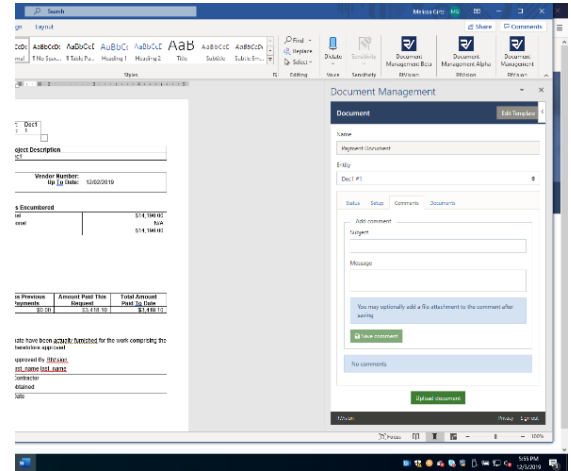

BENEFITS

- ✓ Easily connect with other applications and customize the application to scale with your changing needs

- ✓ Improve auditing and reduce costly mistakes through automated auditing and data management

- ✓ Collaborate with all project stakeholders, improving communication and reducing delays

DOCUMENT MANAGEMENT & RETENTION

Create custom documents and reports through a Microsoft Office integration with OneOffice. Using RSA encryption, digital signatures can be added to any document. Approvers are notified via email when their approval is requested and the status of each document can be easily tracked, stored, and located. Create custom document folders to maintain all relevant documents in a single location. Completed projects can be archived and accessed for years to come, without the need to purge data or 'free up space'.

EXTEND ACCESS

Setup access control rights to provide limited access to external stakeholders, or to segment application access and read-write capabilities by functional role. Extend per project rights to consultants or contractors to provide better project coordination and ensure all individuals are working from current data while reducing the need for data re-entry.

INTEGRATIONS

OneOffice is API-based which makes it easy to integrate into other applications. Integrations into Microsoft Office make it easy to create your own letters, documents and reports. While an integration into ArcGIS provides the ability to pull in map layers and parcel data, as well as send geo-tagged data to your GIS server. Export data and reports into various file types to easily integrate into financial and accounting applications. Pull relevant data into RTVision's OneOffice construction project management application to manage the project, in one location, from start to finish.

ABOUT RTVISION

RTVision is a software-application company that has been working with local government agencies for over 20 years. Our focus is to optimize the impact of local government through inventive technologies that streamline operations, connect people, and protect data integrity. With over 350 product installs across the United States, RTVision products have value in agencies of every size and budget.
